

# CPSC 501 – Assignment 1

Artem Golovin

## **1 What code in which files was altered?**

```
// TODO
```

## **2 What needed to be improved?**

The original project was not necessarily badly designed. It did contain some code smells and thus required some refactorings.

## **3 What refactoring were applied?**

## **4 What code in what files was the result of the refactoring?**

## **5 How was the code tested?**

## **6 Why is the code better structured after the refactoring?**
